Unveiling the Mystery of Caries Management: What's the Secret?
2 or 3 CEU lecture

Course Description:
The non-surgical intervention of incipient carious lesions has become the standard of care in modern dental therapy. Re-mineralization of these lesions is the most noninvasive of all dental procedures and can result in the maintenance of the integrity of the dentition. From risk assessment to implementing therapy, this course will provide the needed information to implement conservative caries management in the dental practice.

Course Objectives:
Upon completion of this course, the participants will be able to:
1. Discuss the etiology and epidemiology of caries
2. Establish a risk management program for caries management in the dental practice which incorporates a team approach.
3. Define CAMBRA and utilize it to identify a patient’s risk potential for developing carious lesions.
